

“Changing student behavior one scan at a time”

3063 W. Chapman Ave. Suite 2409 | Orange, CA 92868 | P: (559) 393-7322

SSICA (*Scan Student Identification Card Authorization*) is an app that allows staff members to use their smartphone, tablet and/or computer (PC, Mac, or Chromebook) to scan student ID cards and provide consequences and/or rewards to their K-12 students. The app is available for FREE for Apple, Android and Windows smartphones and tablets. You can have as many staff members scanning ID cards since **SSICA** works with Internet or without Internet. Users can also connect **SSICA** scanner guns with to their PC to process ID cards. You can still use **SSICA** if your students don't have ID cards.

Each staff member will receive their own credentials that will allow them to log in to the **SSICA** app. **SSICA** can be tailored to fit most needs that each school may have. For example, a school in Tulare, CA uses **SSICA** for the following reasons:

- 1) **Grades** – Staff members scan the student's ID card of the student having a D or an F in the class. The text message arrives in less than 3 second once processed.
- 2) **Students arriving late to school** – Staff members scan student ID cards while students are coming onto campus. When their ID card is scanned, AUTOMATICALLY **SSICA** assigns the student lunch detention and the student is unable to participate in activities.

- 3) **Students attending lunch detention** – Every student that serves their lunch detention has their ID card scanned and their attendance is logged.

Schools using **SSICA**: **McFarland District, Tulare Joint Union HS, ABC USD, Castro Valley USD, Victor Valley USD, Madera USD, Dublin USD and other districts.**

When the ID card is scanned, the screen will turn to one of the 13 colors: **Red, Green, Yellow, Purple, Brown** or other colors available. Also, our program will tell the user of any ID cards that have been scanned *twice* since some students do sell their ID cards to lower classmates. **SSICA** can also be used for bullying, RTI, keep your campus safe, ASB stickers or packages, off campus authorization, track visitors, dance tickets, Pep Rallies, event attendance, field trips, Grand Nite, check to see if the student belongs to a gang, check to see if the student rides the bus or walks home, students who attend Saturday school, free/reduced lunch, students who are allowed to leave early from school, take attendance during a lockdown and so many other reasons why you would want to scan a student's ID card. So what happens at the end of the day after staff has scanned 1,000 student ID cards? All the scans for the day are archived in **SSICA.org** and emailed in a CSV (Excel) file to the school administrator(s) to see all the scans for the day (great way to see who attended lunch detention, went off campus for lunch, came in tardy, etc.). Here is a great news video to watch on **SSICA**: <http://calivs.com/ssicavideo>. **SSICA** works with your current ID cards with barcodes. If a student doesn't have an ID card you can look up the student using the app.

SSICA is compatible with Student Information Systems like Aeries, PowerSchool, Infinite Campus and other systems. **SSICA** can also send text messages and emails to parents/guardians immediately after an ID card is scanned or processed. It usually takes

3 seconds for the text message to arrive to the parent/guardian, which allows for communication to exist between the school and the parent/guardian in real time. Having immediate communication with parents resolves many behavior issues. **SSICA** can also provide the **location** of the scan and this is great for bus transportation or field trips. If you would like more information on **SSICA**, please visit www.drssica.com or contact Dr. Chavez at (559) 393-7322. **SSICA** is a must for any school that would like to change school culture and keep their school safe. Like McFarland High School told Dr. Chavez, “**SSICA** is no longer an option for us but a requirement on our campus”.
